## Contents

# Are you **ready?**

**Over the next four years, we'll be working to help you and your business transition in readiness for ISO 20022 regulatory changes.**

**As a business ourselves, we'll be changing our systems to align with the new regulation and we'll be there to support you every step of the way as well.**

# Introduction

**ISO 20022 is an emerging global standard for payments messaging. It creates a common language and model for payments data across the globe, which provides higher quality payment information than other standards and adapts to new needs and approaches.**

The introduction of ISO 20022 means there will be a requirement to make changes in the near future to send/receive international and domestic payments, which in turn will bring many benefits.

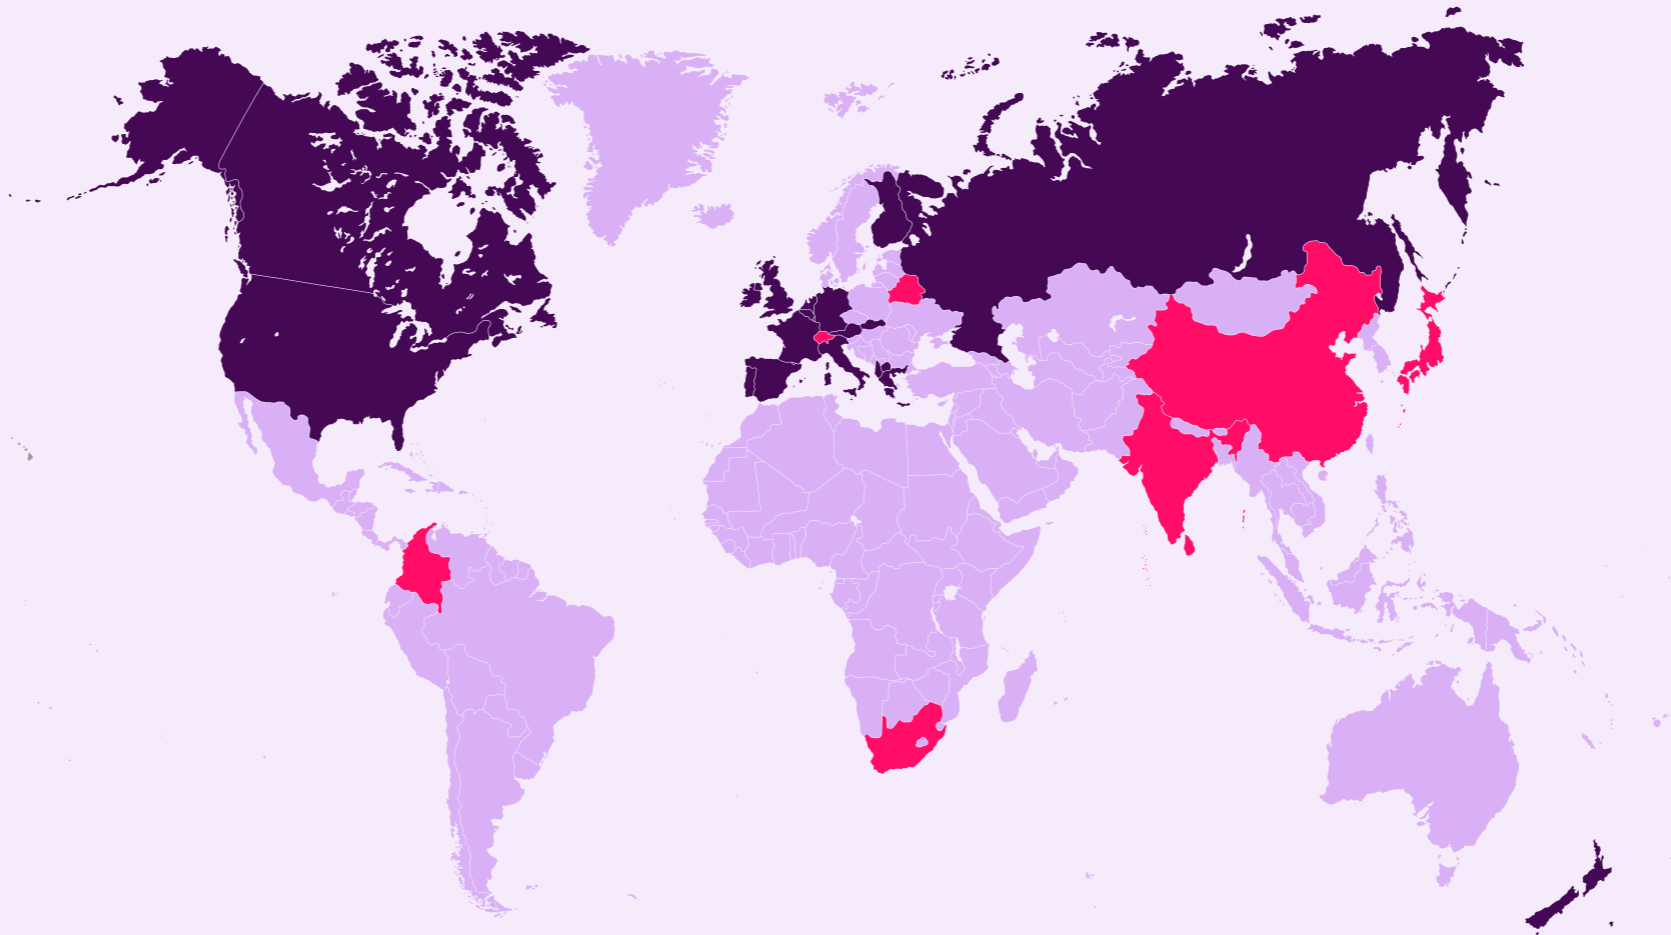

ISO 20022, first published by International Organization of Standardization (ISO) in 2004, has already been adopted in 70 countries – including China, India and Japan – to replace domestic or legacy formats.

Clearing House Automated Payment System (CHAPS) and TARGET2 Euro payment (T2) are on track for delivery, plus SWIFT will adopt the rulebook of the Cross-Border Payments Reporting (CBPR+) working group, where there will be a coexistence phase of MT/MX messages up until 2025.

Within five years, it's predicted that around 80% of high-value global payments by volume and 90% by value will have migrated to ISO 20022.

Planned	Live
Belarus	Bangladesh
Canada	Brunei
Eurozone	Colombia
Hong Kong	China
Malaysia	India
New Zealand	Japan
Russia	Jordan
Singapore	Kosovo
United States	South Africa

# Benefits of ISO 20022 XML

**The main benefit of ISO 20022 is a far better payments experience for customers.**

It also has a direct improvement on efficiency and compliance, as well as harmonisation with international payment systems. The migration to ISO 20022 will also enable improved user functionality, stronger risk management and opportunities for innovation.

## Standardisation

- For different payment types.
- In bank formats (facilitate multi-bank consistency).
- Across global entities.

## Bank agnostic

- No single point of failure.
- Reduced counterparty risk.
- Easier to manage banking relationships.

## Modern and flexible tech

- Simpler transaction, faster troubleshooting and maintenance.
- Choice of connectivity.
- Increased support by major TMS and ERPS.

## Higher automation and STP

- Automated G/L positioning and cash application.
- Reduction of manual entries and payments fx.

## Financial gains/savings

- Reduced tech support needed.
- Focus on valued-added treasury activities.

## Enriched data

- Improved cash visibility and forecasting.
- Facilitates business intelligence.

# NatWest and **ISO 20022** – how will it affect you?

Royal Bank  
of Scotland

## Contents

### **NatWest will support the new ISO 20022 messaging format from the published migration dates for both inbound and outbound CHAPS, Target2 and cross-border payments.**

Today, the bank processes payments through MT message formats, eg MT103, MT202, etc. In ISO 20022, messages will be processed in eXtensible Markup Language (XML) through MX format, eg PAIN (Payment Initiation), Pacs (Payments Clearing and Settlement) and CAMT (Cash Management). The table in Appendix A shows the mapping of the current formation of a payment message to the new ISO format(s) within the payment and reporting messages range.

#### **Indirect participants**

Direct participants will be responsible in ensuring all indirect participants are ISO compliant with regards to systems and processes. We'll work with you to support you through the migration and make the changes required.

ISO 20022 will introduce a different business language across all of the payment products we currently offer, with changes for customers that will depend on the payment channel used. While ISO 20022 affects the bank's operational flows and payments systems, the impacts for financial institutions will be high, especially for those customers who have a direct link to our payment infrastructure. We would advise these customers to set up an in-house project to prepare for the effects of ISO 20022.

#### **Direct participants including correspondent banks**

You'll already be progressing internal programme plans to adopt ISO 20022 messaging standards across all schemas. Any queries related to your own adoption of ISO 20022 should be referred to your SWIFT relationship manager, who can support you with further guidance.

Our ISO 20022 migration strategy has been determined by the approach taken by the scheme operators and regulators, and it's in your interest to plan for the changes to be able to send/receive ISO 20022 messages.

We're currently finalising our core payments systems to be able to support all the ISO 20022 requirements and are finalising the timings of the transition states.

With regard to the service(s) you currently use through ourselves, we'll communicate changes to you directly when they're finalised. The timeline below breaks down the different timelines for the schemas and what these mean for you.

# Latest developments and scheme updates

**Most banks have already started their journey as they migrate to ISO 20022, something that will not happen overnight but will take years to fully implement with challenges along the way.**

The benefits of ISO 20022 migration are clear, with improvements in customer experience and the ability to deliver new services. But keeping up to date with the latest developments and understanding the key points can be difficult. For this reason, we'll be producing a series of ISO 20022-themed brochures to aid understanding of what this means for our customers.

The migration to ISO 20022 has continued to make significant strides. In 2020, SWIFT and the European Central Bank (ECB) decided to delay its implementation of ISO 20022 for TARGET2 and CBPR+ to November 2022. The Bank of England has also changed its approach to CHAPS, with CHAPS set to go live with full enhanced message adoption in April 2023.

Royal Bank of Scotland

## Contents

## BANK OF ENGLAND

The Bank of England has communicated that all CHAPS direct participants will be required to send and receive ISO 2022 payment messages using the published schemas.

From April 2023, on the basis that the SWIFT correspondent banking network will migrate to ISO 2022, the Bank of England will require all CHAPS direct participants to receive enhanced ISO 2022 payment messages.

The Bank of England has published the and enhanced ISO 2022 schemas for the CHAPS and Reserves and Settlement account services on MyStandards\*.

### Note

The new **SWIFT-hosted Transaction Management Platform (TMP)** will provide coexistence measures to intermediate between ISO 2022 messages and MTs to ensure that banks may use the standard of their choice for transactions. SWIFT are in the build stage at present.

The Transaction Management Portal will maintain full ISO 2022 transaction data, which will be accessible by any authorised party in the payment chain. If intermediaries don't pass on full ISO data, it can be accessed via the TMP and members can benefit from the enriched data sooner without needing to wait for all parties in the payment chain to use ISO 2022.

TARGET2 Euro payments (T2) are used for high-value payments in the eurozone and managed by the Bundesbank's Real Time Gross Settlement (RTGS). The Eurosystem is the operator of T2, the RTGS service that enables EU banks to settle euros to each other in real time.

T2 has opted for a "big bang" approach: all Payment Module RTGS account holders shall switch from MT messaging to MX messaging exactly at the SWIFT Standard Release 2022 in November 2022. The usage in T2 of MT1XX, MT2XX, and MT9XX series of messages will be abandoned instantly.

T2 participants are responsible for adapting their own systems and processes to be able to send/receive ISO 2022 messages. This means T2 won't make use of the coexistence period of four years beyond.

From now until November 2022, the payment messaging type MT remains the standard for CBPR+. During this time, users and their supporting colleagues need to train for CBPR+ and prepare systems for native ISO 2022 support.

From November 2022, SWIFT will start the migration to ISO 2022 formats. This means there will be a coexistence period for CBPR+ where MT and MX messages will be processed for cross-border payments. All cross-border ISO 2022 schemas are available via the SWIFT CBPR+ Portal\*.

## Access to SWIFT MyStandards

\*All schemas are now available via SWIFT MyStandards. The owner of the relevant industry format will need to grant access to the specific SWIFT My Standards Community Group. Once you have been given access to the NatWest MyStandards Community Group, you can view the information for ISO 2022 under the option "Standards Releases".

You must be registered for an account on [swift.com](https://www.swift.com) and full instructions on how to register can be found via [this link](#).

Explore MyStandards: no extra steps are required. Access can be via [this link](#) after registration has been completed.

# CBPR+ Translation Portal

**SWIFT has created and published translation rules on MyStandards for selected messages from the SWIFT MT Category 1, 2 and 9 set of messages.**

The Translation Portal will enable you to get full details of field-by-field translation logic to test your translation utilities against CBPR+ approved translation rules. This can be done both ways – from MX to MT and MT to MX.

From November 2022 to November 2025, these translation rules will facilitate the coexistence period. The translation can be tested in the CBPR+

Translation Portal, where users are able to input a SWIFT MT message and view the translated ISO message along with explanations of the relevant fields.

It's to be noted that the rich data in the ISO 20022 messages cannot be mapped directly into an MT message, so truncation of data will be present which poses a number of risks.

## Note

To access the CBPR+ Translation Portal, you'll need to be registered with SWIFT MyStandards and can request access via the CBPR+ landing page (see Appendix B).

## Helping you prepare

As you develop your own ISO 20022 plans, we'll continue to keep you informed with our developments along with any industry communications through our Communications Programme 2021.

If you have any further questions, please contact us via email at [ISOSupport@rbs.co.uk](mailto:ISOSupport@rbs.co.uk)

There are some useful resources available in the public domain that provide overviews of ISO 20022 XML and the different schemas.

There are also some links to training modules on ISO 20022 XML, which can all be found below. We encourage you to use these to build your organisation's knowledge further and to prepare for migration to ISO 20022 XML.

#### **Bank of England – CHAPS**

Contains all items related to the migration of the CHAPS payments to ISO 20022 CML, including CHAPS XML schemas.

#### **ECB – Target2**

Contains all items related to the migration of the Target2 payments to ISO 20022 XML, including Target2 XML schemas.

#### **SWIFT ISO 20022 main site**

Clear information on SWIFT and the ISO 20022 XML approach, timeline and specific articles on different elements of the ISO 20022 XML programme.

# SWIFT ISO 20022 training

## Key SWIFTSmart training sessions to support ISO 20022 learning

### **Introduction to ISO 20022**

Understand how financial messaging standards are built using ISO 20022 XML. Discover who's using ISO 20022 XML and the role of SWIFT.

### **ISO 20022 introduction course**

### **What you need to know about ISO 20022 adoption for payments and reporting**

Understand the essentials of ISO 20022 XML adoption for payments. Gain a view on how the ISO 20022 XML migration will affect you and your customers who are involved in the business of cross-border payments and reporting.

### **ISO 20022 adoption for payments and reporting**

### **Transaction and account reporting with ISO 20022**

Understand the message flows of transaction and account reporting. List which ISO 20022 messages can be used for reporting. Know the related CBPR+ guidelines.

### **ISO 20022 transaction and report accounting**

### **Customer payments and transaction reporting using ISO 20022**

Understand the SWIFT customer payment message flows and related transaction reporting. Identify the various parties involved in a SWIFT customer payment. Understand the differences between a SWIFT customer payment made with serial method and one made with cover method.

### **ISO 20022 customer payments and transaction reporting**

### **Financial institution credit transfer and transaction reporting with ISO 20022**

Understand the SWIFT financial institution credit transfer message flows and related transaction reporting. Identify the various parties involved in a SWIFT financial institution credit transfer. Know which ISO 20022 XML messages can be used in a SWIFT financial institution credit transfer.

### **ISO 20022 financial institution credit transfer and transaction reporting**

### **Financial institution to financial institution credit transfer with ISO 20022 (pacs.009 core)**

Understand the structure of the pacs.009.001.08 and its related flows. Be able to interpret a pacs.009 for a specific scenario, following the CBPR+ guidelines.

### **ISO 20022 financial institution to financial institution credit transfer**
